This document comes with a .TEX file which contains all the LaTeX syntax, it is intended to be read at the same time as the PDF. Comments in latex are done as a percent sign (%) followed by the comment text.
% Insert comment here
The accompanying .TEX file has many comments explaining the LaTeX syntax used.

1 Basic Text

This is normal text.
Bold text
Italic text
Underlined text

Centered Text

Right-aligned Text

Left-aligned Text

This is big text
This is larger text
This is large text
This is normal text
This is small text
This is footnote size text
This is script size text
This is tiny text

If you want two columns, you can use the `\twocolumn[]` and return to single column with `\onecolumn`.

2 Lists

- First item
- Second item

1. Step One
2. Step Two

3 Equations

There are many different ways of writing equations in LaTeX.
$ F=ma$ returns - $F = ma$ - which is in the inline math mode meaning writing equations within a line of text.
The rest of the equations are hard to write in the pdf so please look at the .tex file to see how they are written.

$$E = mc^2 \tag{1}$$

This makes the equation referenceable in the document 1.

$$\langle \psi_i | \psi_j \rangle = \delta_{i,j}$$

$u^i v_i = \sum_i^n u^i v_i = \mathbf{u} \cdot \mathbf{v} = u_1 v_1 + u_2 v_2 + \cdots + u_n v_n$

$$\frac{\mathrm{d}y}{\mathrm{d}x}, \qquad \frac{\partial f}{\partial x}, \qquad \int_0^1 x^2\,dx, \qquad \iiint_0^1 x^2\,dxdydz$$

$$A = \begin{pmatrix} 1 & 2 \\ 3 & 4 \end{pmatrix}$$

x	y
1	2
2	4

Table 1: Example Table

$$c = 2.997\,924\,58 \times 10^8\,\mathrm{m\,s^{-1}}$$

$$\mathbf{F} = m\mathbf{a}$$

$$\nabla \cdot \mathbf{E} = \frac{\rho}{\epsilon_0}$$

4 Code Example

```
import numpy as np
x = np.linspace(0,10,100)
print(x)
```

5 Figures

Add figures using:
